
KAIROS ONE, INC. / CAPABILITY STATEMENT

Capital projects. Clearer decisions.

Software and advisory for schedule review, portfolio oversight and accountable project follow-up.

01 A defined delivery scope

KAIROS ONE, INC. provides capital-project software and advisory services. Scope a software evaluation, recurring platform use, practitioner support or a clearly defined combination. Identify the deliverables, responsibilities and acceptance process in the engagement.

02 Supplier diversity

Kairos identifies as MWBE-eligible, with certification under its own entity in progress. Request current entity and status documentation for your supplier review. Eligibility is not an issued certification or confirmation that participation will count toward a particular program.

03 Experience relevant to the work

Our team's prior advisory experience includes capital-program risk assessment, aviation scheduling, and power-sector project controls. Review the project stories for the work performed and its relevance to Kairos. This background is distinct from Kairos software deployment history.

04 A coordinated supplier review

Bring the procurement owner, technical reviewer and intended users into the conversation early. Identify data classifications, accessibility needs, support expectations and required contract documents before agreeing a project-data evaluation.

Prepare your supplier review

Workflow, deliverables, pricing basis, evaluation conditions, support and acceptance criteria. Data categories, access roles, file exchange, optional connections and organizational requirements. Applicable terms, processing arrangements, accessibility needs and any agency-specific requirements.

This overview is not a certification, customer endorsement or contractual commitment. Delivery scope, charges and requirements are agreed for each engagement. Contact: sales@kairosonegroup.com.
